

VicBooth Spa
by V/COUSTIC

The easiest way to create a spa treatment room

VicBooth Spa allows you to create private spaces, for different therapies, in an acoustically protected environment, without traditional construction, saving money and time.

Spas, hotels, corporate offices, trade shows, shopping centers, any place can become the most sophisticated therapy room, for massages, osteopathic treatment, skin care, or cosmetic action, in complete privacy, isolated from the outside.

All this with an interior made of VMT, a material developed for acoustic performance, that is safe for human health and indoor air quality.

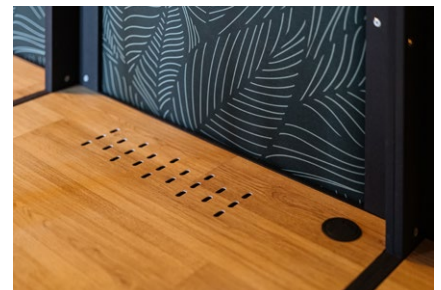

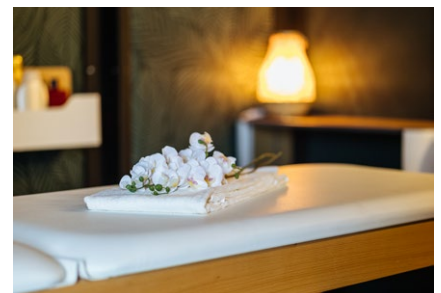

3 × 4 VicBooth Spa

The VicBooth Spa is an intimate wellness haven far from the busyness of its surroundings.

Black Matte

Dimensions

3076 × 4030 × 2277 mm / 121,1" × 158,7" × 89,6" (Ext.)

2968 × 3968 × 2008 mm / 116,9" × 156,2" × 79" (Int.)

Custom design VMT

Vicoustic is using VMT panels in the interior of the booth. VMT is an innovative dyeing technology that allows it to be fully customizable, reproducing any color, pattern, or design, including signage and logos, maintaining the excellent absorption performance of the raw material.

Personalize the interior walls of the VicBooth Spa with your own logo and patterns.

Cable Passage

Each single unit has a 70mm diameter channel in the floor to accommodate passing cables, even after the booth is assembled, making it easily adaptable for all of your sound situations.

Airflow Labyrinth

The Airflow Labyrinth was designed to ensure passive air circulation within the booth. Air passages in the booth's floor and ceiling circulate the air using body heat: users' body heat brings in new air from the outside through the floor and pushes out old air through the ceiling.

Silent Mechanical Ventilation

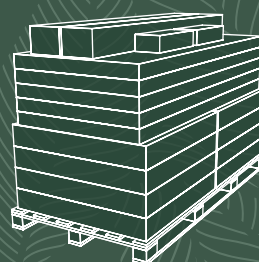

VicBooth Spa includes a mechanical ventilation system (4 units), ensuring total air renovation of a single unit in less than 2 minutes.

Packaging

VicBooth Spa is shipped flat packed.
(3 ×) 2,3 × 1,2 × 1,6 m

Highlights

Made from recycled materials

Walls and ceiling in high-performance VMT, mostly made from recycled plastic bottles.

Custom-design

It is possible to print any pattern or color on the interior walls of the booth.

Modularity

The modular system of the cabin allows you to assemble it anywhere.

Acoustic absorption

The VMT interior presents internal acoustic sound-absorbing walls and ceiling.

Sound insulation

VicBooth Spa is designed to reduce the noise between outside and inside with only 1.1" thick walls.

Certifications

Certified by SCS Global Services for Indoor Advantage™ Gold Furniture, the interior of the VicBooth Spa is also certified with A+ Oeko-Tex (Standard 100) meeting the human-ecological requirements presently established for baby articles. The interior walls of the VicBooth Spa are made with VicPET Wool, a raw material that does not irritate skin or eyes and is humidity resistant.

From plastic waste to amazing acoustics

Our desire to respect our environment played a significant role in developing the VicBooth Spa.

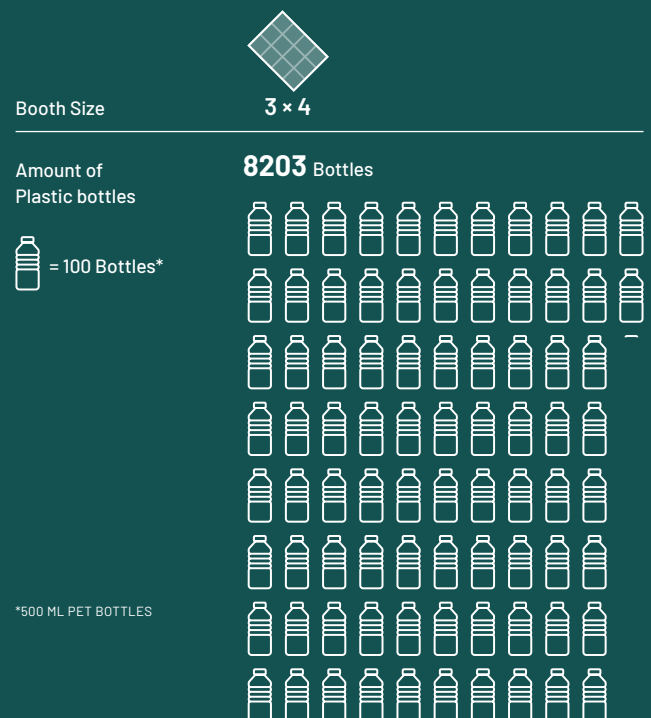

VicBooth Spa is composed of high-quality melamine combined with MDF and VMT, a material composed of VicPET Wool, the acoustic solution developed from PET using plastic bottles that were recycled.

Alongside using recycled and recyclable materials, VMT takes a holistic approach by fully integrating its acoustic performance with other sustainability goals, such as air quality with zero emissions of indoor air pollutants, human safety, and health.

The VMT is certified by OEKO-TEX 100 Standard, meets the human-ecological requirements presently established for baby articles, and meets EuroClass B fire regulations and safety standards. VMT is also washable and easy to clean, simply by a sponge and water.

In addition, the flat packaging for shipping was designed to produce the minimum waste possible, reducing the transportation carbon footprint.

We're recycling the equivalent of 8203 plastic bottles per 3 x 4 booth
